

JAGA ECO TRENCH HEATING

MANUFACTURED BY:

The perfect climate you can feel but not see, easy to install and virtually invisible after installation, Jaga trench convectors will fit into your architectural plans with no need for compromise. Making use of physical principles, particularly those which counteract the cold air that runs down large glazed areas.

*heat outputs certified to EN 442 when incorporating canal compact unit			

The element and bracket option gives greater flexibility to achieve heat output, structural or design requirements. With a wide range of sizes available, elements are ready to be installed in a pre-made duct or void within a floor. This means a completely customised solution can be achieved – whether it's a certain size trench to reach a required output or a seamless finish to perfectly match any interior, Jaga elements gives you the freedom to achieve what is required.

COMPLETE PACKAGE (GRILLE SOLD SEPARATELY)

The ECO Trench has been designed specifically for the Australian market available in various lengths to cover various heat outputs. Designed with ease of installation in mind, complete with heating element pre-mounted within a box, ready to be placed within the floor and connected through convenient cut outs. An aluminium frame at floor level allows a wide variety of grilles to suit any interior - either choose the stocked roll up Natural Aluminium finish grille or have a custom made timber grille to suit your flooring.
